# Selectors - Exercises

## Classes Exercise

If you haven't already done so, have a look at the **02b-Class-Selectors** document in Moodle which describes how to use *class attributes* in both HTML and CSS.

### The HTML

- Open *services.html* from the *balloons* website in your code editor. Locate the first paragraph in the page (*We provide a wide range of services...*).
- Add a **class** attribute to this paragraph's opening tag. The *value* should be **introduction**

### The CSS

- Open the *balloons* website's CSS file in your code editor.
- Add a new *rule* to the style sheet. The *selector* will be **.introduction**.
  - Don't forget the **dot** at the beginning of the selector
  - Make sure the spelling of *introduction* is the same as in the HTML class attribute you added
- Add the following *declarations* to the *rule*:
  - Set the **font-size** to **1.5em**
  - Set the **color** to **#72005f**
  - Set the **font-style** to **italic**
- Save all of your files and preview *services.html* in your browser. Is the first paragraph being displayed differently?
